PROFESSIONAL SUMMARY

Computer Engineering student who ships working software end-to-end across full-stack web, AI-integrated agents, and embedded systems. Comfortable owning projects from concept through deployment. Strong communicator with experience leading teams and mentoring peers. U.S. citizen, eligible for government security clearance, and open to relocation.

SKILLS

Languages: Python, C/C++, JavaScript/Node.js, Assembly, Go, Swift, Java

Full-Stack & Backend: Full-Stack Web Development, API Development, Data Pipelines, Linux Deployment

AI & LLM Engineering: Claude API Integration, Agentic Workflows, Prompt Engineering

Embedded Systems: ESP32, Arduino, FreeRTOS, Sensor Integration, Circuit Design, PWM, ADC

Protocols & Tools: WiFi (HTTP), BLE, Git, MATLAB, LTSpice

PROJECTS

Veridax

Full-Stack Web App | Python & Node.js | veridax.app

- Building and deploying Veridax (veridax.app), a web app for tokenizing information into associated cryptocurrencies on Solana — currently in development, with wallet integration in testing.
- Accelerating iteration using AI-assisted development tools (Claude Code), with version control via a public GitHub repository.

Cipher Suite / Pulse

Solana | Claude API | Agentic AI

- Integrated the Claude API to build an autonomous AI agent that makes decisions using real-time, on-chain Solana data, built as a personal experiment in agentic AI behavior.
- Designed the agent's operating environment end to end, including state management, data flow, and decision execution.

Raytheon Autonomous Vehicle Competition (AVC)

ESP32-CAM | Computer Vision | Embedded Systems | In Progress

- Serving as the software lead for a team building an autonomous ground vehicle for Raytheon's AVC, targeting GPS-denied navigation and color-based target retrieval.
- Designed a real-time color-blob detection and lock-on tracking pipeline on an ESP32-CAM (flood-fill blob segmentation, density-based noise rejection, temporal smoothing) with a live WiFi video stream.

Ultrasonic Proximity Security System

ESP32 | Embedded Systems | IoT

- Designed a real-time embedded system integrating ultrasonic sensing, LED visualization, LCD display, and WiFi/BLE communication.
- Built a BLE interface and WiFi HTTP dashboard for remote monitoring, with filtered sensor data for stable, responsive behavior.

EXPERIENCE

Innovation Fellow

Sept 2026 – Present

Center for Innovation, Jackson State University Library

- Selected as a Fellow to support innovation initiatives and programming through the university library's Center for Innovation.

Community Assistant

May 2023 – Dec 2024

Housing & Residence Life, Jackson State University

- Led a residential community, organizing events to enhance student engagement and retention while providing academic and social support.

Upward Bound Tutor/Mentor

Sept 2022 – Present

Jackson State University (TRiO Programs)

- Tutored students across multiple subjects and mentored peers to build academic confidence.

ACTIVITIES & LEADERSHIP

National Society of Black Engineers (NSBE)

Sept 2025–Present

Member, JSU Chapter

National Society of Leadership and Success (NSLS)

2022–Present

Member

EDUCATION

Jackson State University

Bachelor of Science in Computer Engineering.

Expected May 2027
